

## In Tomorrow's Learning Society...

- Education does not just happen in school.....*the lines are blurring...*
- The focus is on facilitating individual learners rather than on reforming a system
- Free-choice and workplace learning is fully integrated with schooling, allowing learners to meaningfully use learning resources to accomplish *their* learning goals *and.....*

## In Tomorrow's Learning Society....

- Adults *and* children are equally respected teachers and facilitators of science & technology learning as are classroom/university teachers
- A pervasive *and* integrated science learning network is *accessible* to citizens of all ages, not only school-age children

# Fostering Tomorrow's Learning Society

- Restructure Departments of Education at local and national levels to Departments of *Learning*, encompassing all types of lifelong learning
- Establish lifelong learning budgets for citizens, creating structures to enable them to wisely spend their learning budgets at any time in their life and throughout the learning infrastructure

## Fostering Tomorrow's Learning Society, cont.

- Insure that funding for education is more equitably distributed to all parts of the learning infrastructure
- Enable each person to be both a lifelong learner *and* a lifelong teacher; we need infrastructures which support and encourage each person to be both a learner *and* a teacher

"Everything you can imagine is  
real."

Pablo Picasso
